## GENERAL INFORMATION

### Product Description for Equipment under Test (EUT)

<b>EUT Name:</b>	WPON
<b>EUT Model:</b>	WPON AP-Pole
<b>Multiple Model:</b>	WPON AP-Wall
<b>FCC ID:</b>	2ADZR7577WPONAPP
<b>Rated Input Voltage:</b>	AC 100-240V
<b>External Dimension:</b>	246mm(L)* 160 mm(W)*73mm(H)
<b>Serial Number:</b>	180504050
<b>EUT Received Date:</b>	2018.04.23

*Note: The series product, models WPON AP-Pole, WPON AP-Wall are electrically identical, we selected WPON AP-Pole for full test, and please refer to the declaration letter for details.*

### Objective

This type approval report is prepared on behalf of *Nokia Shanghai Bell Co. Ltd.* in accordance with Part 2-Subpart J, and Part 15-Subparts A, B and C of the Federal Communication Commissions rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart C, and section 15.203 15.205 15.207 15.209 and 15.255 rules.

### Related Submittal(s)/Grant(s)

FCC Part 15C DSS submissions with FCC ID: 2ADZR7577WPONAPP.

### Test Methodology

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

All emissions measurement was performed and Bay Area Compliance Laboratories Corp. (Dongguan).

### Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Dongguan) to collect test data is located on the No.69 Pulongcun, Puxinhu Industry Area, Tangxia, Dongguan, Guangdong, China

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No. : 897218, the FCC Designation No. : CN1220.

The test site has been registered with ISED Canada under ISED Canada Registration Number 3062D.

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

### FAR Field Boundary Calculations

The far-field boundary is given in ANSI C63.10-2013:

$$R_m = 2D^2 / \lambda$$

Where:

D is the largest dimension of the antenna aperture in m and

$\lambda$  is the free-space wavelength in m at the frequency of measurement.

The minimum test distance for the frequency range 40GHz-200GHz determine as below:

Model	Frequency Range (GHz)	Largest Dimension of the Horn Antenna (mm)	Minimum Test Distance $R_m$ (m)
M19RH	40-60	46.3	0.57
861V/385	50-75	43.7	0.64
M12RH	60-90	30.02	0.36
M08RH	90-140	19.7	0.23
M05RH	140-220	12.5	0.30

Note: the maximum antenna dimension of the EUT was 18 mm. This length is smaller than the largest dimension of the smallest Horn Antenna used to measure up in the frequency range 40 GHz to 140 GHz, and larger than 140GHz to 220GHz. Given that the test distances used were 1.0 m from 40 GHz to 90 GHz, and 0.5 m from 90 GHz to 200 GHz, it can be seen that the EUT was always in the Far-field of the Receive Antenna during all Radiated Emissions Tests.

## SYSTEM TEST CONFIGURATION

### Description of Test Configuration

The system was configured for testing in Engineering Mode, which was provided by the manufacturer.

The device built in 3 identical 60 GHz module, but module 1 only supports SISO mode(ANT0,1,2), and module 2(ANT 3,4) and 3(ANT 5,6) only supports MIMO mode(Output from Port 0 and 1), that was default by software.

All of the modules only support 3 channels as below:

Channel Number	Frequency (MHz)	Channel Number	Frequency (MHz)
1	58320	3	62640
2	60480	/	/

### EUT Exercise Software

The software “QRCT3.0” was used for testing, which was provided by manufacturer. The worst condition (maximum power) was configured by system default setting. The worst data rate: 1Gbps.

### Equipment Modifications

No modifications were made to the EUT.

### Local Support Equipment List and Details

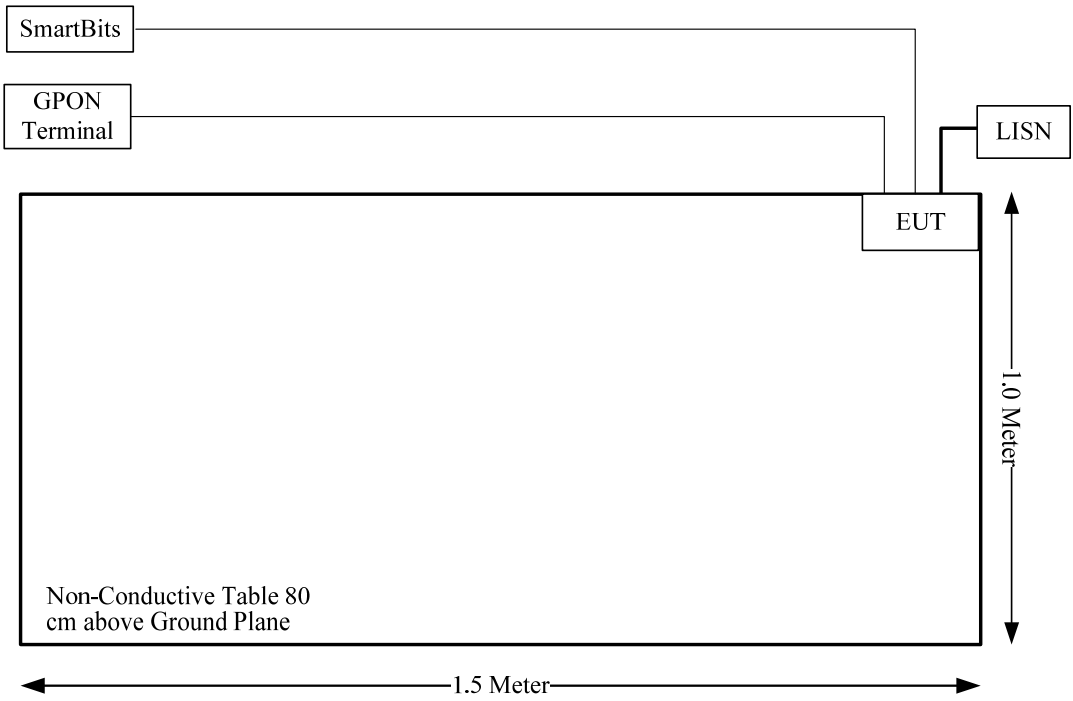

Manufacturer	Description	Model	Serial Number
HUAWEI	GPON Terminal	HG8245Q2	2102311RGB6RH1000087
Sprirent	SmartBits	600B	DE7885

### Support Cable List and Details

Cable Description	Shielding Type	Ferrite Core	Length (m)	From Port	To
RJ45 Cable	yes	no	10	EUT	GPON Terminal
Optical Cable	no	no	10	EUT	SmartBits

Block Diagram of Test Setup

**SUMMARY OF TEST RESULTS**

FCC Rules	Description of Test	Result
§1.1310&§2.1091	Maximum Permissible Exposure	Compliance
§15.203	Antenna Requirement	Compliance
§15.207 (a)	AC Line Conducted Emissions	Compliance
§ 15.255 (e)(1)	Occupied Bandwidth	Compliance
§15.255 (c)	EIRP Power	Compliance
§15.255 (e)	Peak Conducted Output Power	Compliance
§15.255 (d)	Spurious Emissions	Compliance
§15.255 (f)	Frequency Stability	Compliance
§15.255 (a)(h)	Operation Restriction And Group Installation	Compliance

## **FCC§1.1310 & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)**

### **Applicable Standard**

According to subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

<b>(B) Limits for General Population/Uncontrolled Exposure</b>				
<b>Frequency Range (MHz)</b>	<b>Electric Field Strength (V/m)</b>	<b>Magnetic Field Strength (A/m)</b>	<b>Power Density (mW/cm<sup>2</sup>)</b>	<b>Averaging Time (minutes)</b>
0.3–1.34	614	1.63	*(100)	30
1.34–30	824/f	2.19/f	*(180/f <sup>2</sup> )	30
30–300	27.5	0.073	0.2	30
300–1500	/	/	f/1500	30
1500–100,000	/	/	1.0	30

f = frequency in MHz; \* = Plane-wave equivalent power density;

According to §1.1310 and §2.1091 RF exposure is calculated.

### **Calculation Formula:**

Prediction of Power Density at the distance of the applicable MPE Limit

$S = PG/4\pi R^2$  = power density (in appropriate units, e.g. mW/cm<sup>2</sup>);

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

For simultaneously transmit system, the calculated power density should comply with:

$$\sum_i \frac{S_i}{S_{Limit,i}} \leq 1$$

**Calculated Data:**

Radio	Frequency (GHz)	E.I.R.P		Evaluation Distance (cm)	Power Density (mW/cm <sup>2</sup> )	MPE Limit (mW/cm <sup>2</sup> )
		(dBm)	(mW)			
60G Module 1	58.32-62.64	31	2511.89	25	0.16	1.0
60G Module 2	58.32-62.64	34	1258.93	25	0.32	1.0
60G Module 3	58.32-62.64	34	1258.93	25	0.32	1.0
Bluetooth	2.402-2.48	2.92	1.96	25	0.0003	1.0

Note: The output power was declared by manufacturer(Bluetooth conducted power is -2dBm, antenna gain 4.92dBi)

The three 60GHz radio and Bluetooth can transmit simultaneously:

$$\sum_i \frac{S_i}{S_{Limit,i}}$$

$$= S_{60G1}/Limit_{60G1} + S_{60G2}/Limit_{60G2} + S_{60G3}/Limit_{60G3} + S_{BT}/Limit_{BT}$$

$$= 0.16/1.0 + 0.32/1.0 + 0.32/1.0 + 0.0003/1.0$$

$$= 0.8$$

**Result:** The device complied with the applicable MPE Limit at the 25 cm distance.

---

## **FCC§15.203 - ANTENNA REQUIREMENT**

---

### **Applicable Standard**

For intentional device, according to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used.

### **Antenna Connector Construction**

The EUT has 7 internal antennas, which can be seen in the EUT internal Photos. Therefore, the EUT complied with the antenna requirements stated in FCC Rules Part 15 Subpart C Section 15.203.

**Result:** Compliant.

## FCC §15.207 (a) – AC LINE CONDUCTED EMISSIONS

### Applicable Standard

FCC§15.207

### EUT Setup

Note: 1. Support units were connected to second LISN.  
2. Both of LISNs (AMN) 80 cm from EUT and at the least 30 cm from other units and other metal planes support units.

The setup of EUT is according with per ANSI C63.10-2013 measurement procedure. The specification used was with the FCC Part 15.207 limits.

The spacing between the peripherals was 10 cm.

The adapter was connected to a 120 VAC/60 Hz power source

### EMI Test Receiver Setup

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

Frequency Range	IF B/W
150 kHz – 30 MHz	9 kHz

## Test Procedure

During the conducted emission test, the adapter was connected to the first LISN.

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All data was recorded in the Quasi-peak and average detection mode.

## Corrected Amplitude & Margin Calculation

The basic equation is as follows:

$$V_C = V_R + A_C + VDF$$

$$C_f = A_C + VDF$$

Herein,

$V_C$  (cord. Reading): corrected voltage amplitude

$V_R$ : reading voltage amplitude

$A_C$ : attenuation caused by cable loss

VDF: voltage division factor of AMN

$C_f$ : Correction Factor

The “**Margin**” column of the following data tables indicates the degree of compliance within the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Limit} - \text{Corrected Amplitude}$$

## Test Results Summary

According to the recorded data in following table, the EUT complied with the FCC Part 15.207.

## Test Data

### Environmental Conditions

Temperature:	25.5 °C
Relative Humidity:	57 %
ATM Pressure:	101.7 kPa

## **FCC§15.255(c) - EQUIVALENT ISOTROPICALLY RADIATED POWER (EIRP)**

---

### **Applicable Standard**

(c) Within the 57-71 GHz band, emission levels shall not exceed the following equivalent isotropically radiated power (EIRP):

(1) Products other than fixed field disturbance sensors and short-range devices for interactive motion sensing shall comply with one of the following emission limits, as measured during the transmit interval:

(i) The average power of any emission shall not exceed 40 dBm and the peak power of any emission shall not exceed 43 dBm; or

(ii) For fixed point-to-point transmitters located outdoors, the average power of any emission shall not exceed 82 dBm, and shall be reduced by 2 dB for every dB that the antenna gain is less than 51 dBi. The peak power of any emission shall not exceed 85 dBm, and shall be reduced by 2 dB for every dB that the antenna gain is less than 51 dBi.

(A) The provisions in this paragraph for reducing transmit power based on antenna gain shall not require that the power levels be reduced below the limits specified in paragraph (b)(1)(i) of this section.

(B) The provisions of §15.204(c)(2) and (4) that permit the use of different antennas of the same type and of equal or less directional gain do not apply to intentional radiator systems operating under this provision. In lieu thereof, intentional radiator systems shall be certified using the specific antenna(s) with which the system will be marketed and operated. Compliance testing shall be performed using the highest gain and the lowest gain antennas for which certification is sought and with the intentional radiator operated at its maximum available output power level. The responsible party, as defined in §2.909 of this chapter, shall supply a list of acceptable antennas with the application for certification.

(2) For fixed field disturbance sensors that occupy 500 MHz or less of bandwidth and that are contained wholly within the frequency band 61.0-61.5 GHz, the average power of any emission, measured during the transmit interval, shall not exceed 40 dBm, and the peak power of any emission shall not exceed 43 dBm. In addition, the average power of any emission outside of the 61.0-61.5 GHz band, measured during the transmit interval, but still within the 57-71 GHz band, shall not exceed 10 dBm, and the peak power of any emission shall not exceed 13 dBm.

(3) For fixed field disturbance sensors other than those operating under the provisions of paragraph (b)(2) of this section, and short-range devices for interactive motion sensing, the peak transmitter conducted output power shall not exceed -10 dBm and the peak EIRP level shall not exceed 10 dBm.

(4) The peak power shall be measured with an RF detector that has a detection bandwidth that encompasses the 57-71 GHz band and has a video bandwidth of at least 10 MHz. The average emission levels shall be measured over the actual time period during which transmission occurs.

### **Test Procedure**

Refer to ANSI C63.10-2013 Clause 9.11

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

At frequencies greater than or equal to 1 GHz, measurements were recorded using the Peak Detector and the CISPR Average Detector.

**Environmental Conditions**

<b>Temperature:</b>	27.6 °C
<b>Relative Humidity:</b>	60 %
<b>ATM Pressure:</b>	100.4 kPa

*The testing was performed by Blake Yang on 2018-04-24.*

62.64	AV	H	-19.97	24	24.52	40	15.48

Note 1: The measurement distance is 1.0 m.

Note 2: RF Detector and a DSO with a Bandwidth greater than 10 MHz were used to make the measurements

Note 3: the measurement performed with radiation method, according to ANSI C63.10-2013 Clause 9.11:

$$E = 126.8 - 20 \log(\lambda) + P - G$$

$$EIRP = E_{\text{Meas}} + 20 \log(d_{\text{Meas}}) - 104.7$$

$$\Rightarrow EIRP = 126.8 - 20 \log(\lambda) + P - G + 20 \log(1) - 104.7$$

$$= 22.1 - 20 \log(\lambda) + P - G$$

$\lambda$  the free-space wavelength in m at the frequency of measurement.  
 $= 3 \times 10^8 / f$

$f$  is frequency in Hz.

Note 4: The Mixers and it's RF cables is compose a system for calibration.

Note 5: the test data recorded was the maximum polarization.

Note 6: Substituted SG Level is the power recoded in Step e) 9) of §9.11 of ANSI C63.10-2013

Note 7: Horn antenna gain is 24dBi

## FCC§15.255(e)(1)- OCCUPIED BANDWIDTH

### Applicable Standard

Transmitters with an emission bandwidth of less than 100 MHz must limit their peak transmitter conducted output power to the product of 500 mW times their emission bandwidth divided by 100 MHz. For the purposes of this paragraph, emission bandwidth is defined as the instantaneous frequency range occupied by a steady state radiated signal with modulation, outside which the radiated power spectral density never exceeds 6 dB below the maximum radiated power spectral density in the band, as measured with a 100 kHz resolution bandwidth spectrum analyzer. The center frequency must be stationary during the measurement interval, even if not stationary during normal operation (e.g., for frequency hopping devices).

### Test Procedure

Refer to ANSI C63.10-2013 Clause 6.9 & 9.3

the Marker is to be placed on the highest amplitude peak of the “hash”, and then the Display Line should be moved to the -6dB than the highest amplitude peak, the Marker should be moved leftward off of the peak amplitude point to identify the -6 dB point, the Delta should be moved rightward off of the peak amplitude point to identify the -6 dB point. The Delta is the 6 dB Bandwidth.

### Environmental Conditions

<b>Temperature:</b>	27.6 °C
<b>Relative Humidity:</b>	60 %
<b>ATM Pressure:</b>	100.4 kPa

**FCC§15.255(e) –PEAK CONDUCTED OUTPUT POWER****Applicable Standard**

(e) Except as specified paragraph (e)(1) of this section, the peak transmitter conducted output power shall not exceed 500 mW. Depending on the gain of the antenna, it may be necessary to operate the intentional radiator using a lower peak transmitter output power in order to comply with the EIRP limits specified in paragraph (b) of this section.

(1) Transmitters with an emission bandwidth of less than 100 MHz must limit their peak transmitter conducted output power to the product of 500 mW times their emission bandwidth divided by 100 MHz. For the purposes of this paragraph, emission bandwidth is defined as the instantaneous frequency range occupied by a steady state radiated signal with modulation, outside which the radiated power spectral density never exceeds 6 dB below the maximum radiated power spectral density in the band, as measured with a 100 kHz resolution bandwidth spectrum analyzer. The center frequency must be stationary during the measurement interval, even if not stationary during normal operation (e.g., for frequency hopping devices).

(2) Peak transmitter conducted output power shall be measured with an RF detector that has a detection bandwidth that encompasses the 57-71 GHz band and that has a video bandwidth of at least 10 MHz.

(3) For purposes of demonstrating compliance with this paragraph, corrections to the transmitter conducted output power may be made due to the antenna and circuit loss.

**Test Procedure**

Refer to ANSI C63.10-2013 Clause 9.7 : equation to calculate power output.

**Environmental Conditions**

<b>Temperature:</b>	27.6 °C
<b>Relative Humidity:</b>	60 %
<b>ATM Pressure:</b>	100.4 kPa

*The testing was performed by Blake Yang on 2018-04-24.*

**Test Data**

*Note 1: EIRP Power refer to §15.255 (b)*

*Note 2: For radiated emissions measurements, calculated transmitter conducted output power  $P(con)$*

$$P(con) = EIRP - \text{Antenna gain}(dBi)$$

**FCC§15.205, §15.209&§15.255(d)- TRANSMITTER SPURIOUS EMISSIONS****Applicable Standard**

(d) Limits on spurious emissions:

(1) The power density of any emissions outside the 57-64 GHz band shall consist solely of spurious emissions.

(2) Radiated emissions below 40 GHz shall not exceed the general limits in §15.209.

(3) Between 40 GHz and 200 GHz, the level of these emissions shall not exceed  $90 \text{ pW/cm}^2$  at a distance of 3 meters.

(4) The levels of the spurious emissions shall not exceed the level of the fundamental emission.

**EUT Setup**

Below 1 GHz:

1-26.5 GHz:

26.5-40 GHz:

Above 40GHz:

The antenna is scanned around the entire perimeter surface of the EUT, in both horizontal and vertical polarizations, at the distance of 1.0 m from 40 GHz to 90 GHz, and 0.5 m from 90 GHz to 200 GHz.

The radiated emission and out of band emission tests were performed in the 3 meters chamber test site A, using the setup accordance with the ANSI C63.10-2013 The specification used was the FCC 15.209/15.205 and FCC 15.255 limits.

### Test Equipment Setup

The system was investigated from 30 MHz to 200 GHz.

During the radiated emission test, the EMI test receiver & Spectrum Analyzer Setup were set with the following configurations:

Frequency Range	RBW	Video B/W	IF B/W	Detector
30 MHz – 1000 MHz	120 kHz	300 kHz	120 kHz	QP
1-40 GHz	1MHz	3 MHz	/	PK
	1MHz	10 Hz	/	Ave
40 GHz – 200 GHz	1MHz	3 MHz	/	PK

## Test Procedure

Refer to ANSI C63.10-2013 Clauses 9.9, 9.12, and 9.13.

A Maximizing procedure was performed to ensure that the highest emissions from the EUT were actually measured in all of the Test Arrangements of the EUT and Local Support Equipment.

In accordance with FCC Rules Part 15 Subpart A Section 15.35, from 30 MHz to 1 GHz all radiated emissions measurements were made using a Quasi-peak Detector, and from 1 GHz to 40 GHz, all radiated emissions measurements were made using a Peak Detector and CISPR Average Detector. In accordance with FCC Rules Part 15 Subpart C Section 15.255, from 40 GHz to 200 GHz, all radiated emissions measurements were made using a Peak Detector.

According to C63.10, the 26.5-40GHz test result shall be extrapolated to the specified distance using an extrapolation factor of 20dB/decade from 3m to 1m

Distance extrapolation factor =  $20 \log (\text{specific distance [3m]}/\text{test distance [1m]}) \text{ dB} = 9.54 \text{ dB}$

All emissions under the average limit and under the noise floor have not recorded in the report.

## Corrected Amplitude & Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Loss and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Corrected = Antenna Loss + Cable Loss - Amplifier Gain

Or

Corrected Amplitude = Antenna Loss + Cable Loss - Amplifier Gain- Distance extrapolation factor

The “**Margin**” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

Result = Reading + Corrected

Margin = Limit - Result

**Environmental Conditions**

<b>Temperature:</b>	25.6-27.6 °C
<b>Relative Humidity:</b>	45-60 %
<b>ATM Pressure:</b>	100.4-101.6 kPa

*The testing was performed by Vern Shen&Blake Yang from 2018-04-24 to 2018-07-15.*

Note 1:

$$\text{EIRP} = \text{E-meas} + 20\log(\text{d-meas}) - 104.7$$

where:

EIRP : is the equivalent isotropically radiated power, in dBm

E-meas. : is the field strength of the emission at the measurement distance, in dBμV/m

d-meas. : is the measurement distance, in m

Note 2: The test distance is 1 m. for 40-90GHz, and 0.5m for 90-200GHz

Note 3: Corrected Amplitude = Meter Reading + Antenna Factor

Note 4: The Mixers and it's RF cables is compose a system for calibration, the conversion factor was added into the test Spectrum Analyzer in testing.

Note 5:

$$\text{PD} = \frac{\text{EIRP}_{\text{Linear}}}{4\pi d^2}$$

where

PD is the power density at the distance specified by the limit, in W/m<sup>2</sup>EIRP<sub>Linear</sub> is the equivalent isotropically radiated power, in watts

d is the distance at which the power density limit is specified, in m

The Specified distance is 3m.

Note 1:

$$\text{EIRP} = \text{E-meas} + 20\log(\text{d-meas}) - 104.7$$

where:

EIRP : is the equivalent isotropically radiated power, in dBm

E-meas. : is the field strength of the emission at the measurement distance, in dBμV/m

d-meas. : is the measurement distance, in m

Note 2: The test distance is 1 m. for 40-90GHz, and 0.5m for 90-200GHz

Note 3: Corrected Amplitude = Meter Reading + Antenna Factor

Note 4: The Mixers and it's RF cables is compose a system for calibration, the conversion factor was added into the test Spectrum Analyzer in testing.

Note 5:

$$\text{PD} = \frac{\text{EIRP}_{\text{Linear}}}{4\pi d^2}$$

where

PD is the power density at the distance specified by the limit, in W/m<sup>2</sup>EIRP<sub>Linear</sub> is the equivalent isotropically radiated power, in watts

d is the distance at which the power density limit is specified, in m

The Specified distance is 3m.

## FCC§15.255(f) - FREQUENCY STABILITY

### Applicable Standard

Fundamental emissions must be contained within the frequency bands specified in this section during all conditions of operation. Equipment is presumed to operate over the temperature range –20 to +50 degrees Celsius with an input voltage variation of 85% to 115% of rated input voltage, unless justification is presented to demonstrate otherwise.

### Test Procedure

Frequency Stability vs. Temperature: The adapter of the equipment under test was connected to an AC power source. The EUT was placed inside the temperature chamber. Place the Horn antenna outside the temperature chamber. Place the EUT antenna toward the Horn antenna.

After the temperature stabilized for approximately 20 minutes, the frequency output was recorded from the communication test set.

Frequency Stability vs. Voltage: An external variable AC power supply was connected to the equipment under test. The voltage was set from 85% to 115% of the nominal value. The output frequency was recorded for each voltage.

### Environmental Conditions

Temperature:	27.6 °C
Relative Humidity:	60 %
ATM Pressure:	100.4 kPa

*The testing was performed by Blake Yang on 2018-04-24.*

*Test Mode: Transmitting(test performed at ANT 0 transmitting)*

**Test Data**

Please refer to the following table:

Temperature	Voltage	Frequency (MHz)			
°C	V <sub>AC</sub>	f <sub>L</sub> at Low Channel	f <sub>H</sub> at High Channel	f <sub>L</sub> Limit	f <sub>H</sub> Limit
-20	120	57402	63559	57000	71000

---

**§15.255(a) (h)– OPERATION RESTRICTION AND GROUP INSTALLTION**

---

**Applicable Standard**

§15.255 (a) Operation under the provisions of this section is not permitted for the following products:

- (1) Equipment used on aircraft or satellites.
- (2) Field disturbance sensors, including vehicle radar systems, unless the field disturbance sensors are employed for fixed operation. For the purposes of this section, the reference to fixed operation includes field disturbance sensors installed in fixed equipment, even if the sensor itself moves within the equipment.

§15.255 (h) Any transmitter that has received the necessary FCC equipment authorization under the rules of this chapter may be mounted in a group installation for simultaneous operation with one or more other transmitter(s) that have received the necessary FCC equipment authorization, without any additional equipment authorization. However, no transmitter operating under the provisions of this section may be equipped with external phase-locking inputs that permit beam-forming arrays to be realized.

**Result of Operation Restriction**

The Manufacturer declared that the EUT will not be advertised or sold for use on aircraft or satellites. The user manual includes a statement that cautions users that it is not permitted to use the product on aircraft or satellites.

**Result of Group installation**

The frequency, amplitude and phase of the transmit signal are set within the EUT. There are no external phase-locking inputs or any other means of combining two or more units together to realize a beam-forming array
