

**FCC RF TEST REPORT**  
**No. 170603051SHA-001**

Applicant : Alcatel-Lucent Shanghai Bell Co.,Ltd.  
388-389#, Ningqiao Road, Pudong Jinqiao, Shanghai, China

Manufacturer : Alcatel-Lucent Shanghai Bell Co.,Ltd.  
388-389#, Ningqiao Road, Pudong Jinqiao, Shanghai, China

Product Name : Digital Home CPE

Type/Model : A-240Z-A

EMA Code : 3FE 46615 AAAA

**TEST RESULT : PASS**

**SUMMARY**

The equipment complies with the requirements according to the following standard(s) or specification:

**47CFR Part 15 (2016): Radio Frequency Devices (Subpart E)**

**ANSI C63.10 (2013): American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices**

Date of issue: July 5, 2017

## 1 GENERAL INFORMATION

### 1.1 Description of Client

Applicant : Alcatel-Lucent Shanghai Bell Co., Ltd.  
388-389#, Ningqiao Road, Pudong Jinqiao, Shanghai, China  
Manufacturer : Alcatel-Lucent Shanghai Bell Co., Ltd.  
388-389#, Ningqiao Road, Pudong Jinqiao, Shanghai, China

### 1.2 Identification of the EUT

Product Name : Digital Home CPE  
Type/model : A-240Z-A  
FCC ID : 2ADZRA240ZA

### 1.3 Technical Specification

Operation Frequency : 5250 ~ 5350MHz,  
Band 5470 ~ 5725MHz  
Type of Modulation : OFDM(BPSK, QPSK, 16QAM, 64QAM, 256QAM)  
EUT Modes of Modulation : 802.11a, 802.11n/ac(HT20),  
802.11n/ac(HT40), 802.11ac(VHT80)  
Channel Number : For 5250 ~ 5350MHz Band: Channel 52 - 64;  
For 5470 ~ 5725MHz Band: Channel 100 - 144  
Description of EUT : The EUT is a digital home CPE, it support WIFI, ZigBee and Z-Wave, and there have only one model, we test it and listed the WIFI 5G band results in this report.  
Antenna : PCB antenna, 3dBi max Peak gain, FAF connector  
Rating : 100-240V, 50/60Hz  
Category of EUT : Class B  
EUT type :  Table top  
 Floor standing  
Sample received date : March 6, 2017  
Date of test : March 6, 2017 to April 18, 2017

## 2 TEST SPECIFICATIONS

### 2.1 Standards or specification

47CFR Part 15 (2016)

ANSI C63.10 (2013)

KDB 789033 D02 v01r04

### 2.2 Mode of operation during the test

While testing transmitting mode of EUT, the internal modulation and continuously transmission was applied.

The lowest, middle and highest channel were tested as representatives.

Frequency Band (MHz)	Mode	Lowest (MHz)	Middle (MHz)	Highest (MHz)
5250~5350MHz	802.11a	5260	5300	5320
	802.11n20	5260	5300	5320
	802.11n40	5270	/	5310
	802.11ac80	/	5290	/
5470~5725MHz	802.11a	5500	5600	5720
	802.11n20	5500	5600	5720
	802.11n40	5510	5590	5710
	802.11ac80	5530	5610	5690

### MIMO Function Description:

Mode	Tx/Rx Function	Beamforming Function
802.11a	1Tx/1Rx	No
802.11n20	4Tx/4Rx	No
802.11n40	4Tx/4Rx	No
802.11ac80	4Tx/4Rx	No

**Data rate VS Power:**

The pre-scan for the conducted power with all rates in each modulation and bands was used, and the worst case was found and used in all test cases.

After this pre-scan, we choose the following table of the data rates as the worst case.

Frequency Band (MHz)	Mode	Worst case data rate
5250~5350	802.11a	6Mbps
	802.11n20	MCS24
	802.11n40	MCS24
	802.11ac80	MCS0NSS4
5500~5725	802.11a	6Mbps
	802.11n20	MCS24
	802.11n40	MCS24
	802.11ac80	MCS0NSS4

**Duty cycle:**

Mode	Duty cycle (%)	Duty cycle factor (dB)
802.11a	95.07	0.22
802.11n20	94.91	0.23
802.11n40	90.33	0.44
802.11ac80	84.37	0.74

## 802.11a

## 802.11n20

## 802.11n40

## 802.11ac80

### 2.3 Test software list

Test Items	Software	Manufacturer	Version
Conducted emission	ESxS-K1	R&S	V2.1.0
Radiated emission	ES-K1	R&S	V1.71

Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

### 3 26 dB Bandwidth & Emission Bandwidth (99%)

Test Status: Tested

#### 3.1 Test limit

None

#### 3.2 Test Configuration

#### 3.3 Test procedure and test setup

The bandwidth was measured from the antenna port of the EUT according to the measurement method refer to KDB 789033D02: section C.

##### Emission Bandwidth (EBW)

- a) Set RBW = approximately 1% of the emission bandwidth.
- b) Set the VBW > RBW.
- c) Detector = Peak.
- d) Trace mode = max hold.
- e) Measure the maximum width of the emission that is 26 dB down from the maximum of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately 1%.

## **99 Percent Occupied Bandwidth**

The following procedure shall be used for measuring (99 %) power bandwidth:

1. Set center frequency to the nominal EUT channel center frequency.
2. Set span = 1.5 times to 5.0 times the OBW.
3. Set RBW = 1 % to 5 % of the OBW
4. Set VBW  $\geq 3 \cdot$  RBW
5. Video averaging is not permitted. Where practical, a sample detection and single sweep mode shall be used. Otherwise, peak detection and max hold mode (until the trace stabilizes) shall be used.
6. Use the 99 % power bandwidth function of the instrument (if available).
7. If the instrument does not have a 99 % power bandwidth function, the trace data points are recovered and directly summed in power units. The recovered amplitude data points, beginning at the lowest frequency, are placed in a running sum until 0.5 % of the total is reached; that frequency is recorded as the lower frequency. The process is repeated until 99.5 % of the total is reached; that frequency is recorded as the upper frequency. The 99% occupied bandwidth is the difference between these two frequencies.

### 3.4 Test protocol

Temperature : 25 °C  
 Relative Humidity : 55 %

## 4 Maximum Conducted Output Power

Test result: Pass

### 4.1 Test limit

For an outdoor access point operating in the band 5.15-5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W provided the maximum antenna gain does not exceed 6 dBi.

The maximum e.i.r.p. at any elevation angle above 30 degrees from the horizon must not exceed 125 mW (21 dBm).

For an indoor access point operating in the band 5.15-5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W provided the maximum antenna gain does not exceed 6 dBi.

For fixed point-to-point access points operating in the band 5.15-5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W.

For mobile and portable client devices in the 5.15-5.25 GHz band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi.

For the 5.25-5.35 GHz and 5.47-5.725 GHz bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or  $11 \text{ dBm} + 10 \log B$ , where B is the 26 dB emission bandwidth in megahertz.

For the band 5.725-5.85 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W.

If transmitting antennas of directional gain greater than 6dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

## 4.2 Test Configuration

## 4.3 Test procedure and test setup

The power output per FCC §15.407(a) was measured from the antenna port of the EUT according to the measurement method refer to KDB 789033D02: Method PM.

#### 4.4 Test protocol

Temperature : 25 °C  
 Relative Humidity : 55 %

#### U-NII-2A Band Conducted Power:

Power limit calculation:

Frequency range (MHz)	Mode	26dB bandwidth (MHz)	11+10log B (dBm)	Chosen limit (dBm)
5250 - 5350	802.11a	21.27	24.28	24.00
	802.11n20	21.41	24.31	24.00
	802.11n40	39.90	27.01	24.00
	802.11ac80	81.31	30.10	24.00

Note: Chosen limit is 24dBm or 11dBm + 10logB (26dB bandwidth) which is lesser.

Mode	Frequency (MHz)	Reading + Duty cycle factor (dBm)				Max Power (dBm)	Limit (dBm)
		Port 0	Port 1	Port 2	Port 3		
802.11 a	5260	16.62	17.45	18.57	17.84	18.57	24.00
	5300	16.43	17.27	17.37	17.64	17.64	24.00
	5320	20.16	21.05	21.06	21.51	21.51	24.00

Mode	Frequency (MHz)	Reading + Duty cycle factor (dBm)				Total Power (dBm)	Limit (dBm)
		Port 0	Port 1	Port 2	Port 3		
802.11n20	5260	17.12	17.73	17.83	18.51	23.85	24.00
	5300	17.13	17.52	17.62	18.38	23.71	24.00
	5320	16.18	16.94	17.24	17.82	23.11	24.00
802.11n40	5270	16.86	17.37	17.42	18.05	23.47	24.00
	5310	17.01	17.52	17.71	18.26	23.67	24.00
802.11ac80	5290	16.73	17.31	17.53	18.16	23.48	24.00

Note: Total power =  $10 * \lg(10^{\text{port 0} / 10} + 10^{\text{port 1} / 10} + 10^{\text{port 2} / 10} + 10^{\text{port 3} / 10})$ .

**U-NII-2C Band Conducted Power:**

Power limit calculation:

Frequency range (MHz)	Mode	26dB bandwidth (MHz)	11+10log B (dBm)	Chosen limit (dBm)
5470 - 5725	802.11a	20.80	24.18	24.00
	802.11n20	20.89	24.20	24.00
	802.11n40	38.99	26.91	24.00
	802.11ac80	80.78	30.07	24.00

Note: Chosen limit is 24dBm or 11dBm + 10logB (26dB bandwidth) which is lesser.

Mode	Frequency (MHz)	Reading + Duty cycle factor (dBm)				Max Power (dBm)	Limit (dBm)
		Port 0	Port 1	Port 2	Port 3		
802.11 a	5500	18.11	18.95	19.12	19.04	19.12	24.00
	5600	18.80	18.71	19.43	19.48	19.48	24.00
	5720	21.45	21.72	21.68	20.75	21.72	24.00

Mode	Frequency (MHz)	Reading + Duty cycle factor (dBm)				Total Power (dBm)	Limit (dBm)
		Port 0	Port 1	Port 2	Port 3

802.11ac80	5530	14.98	15.63	15.79	16.15	21.68	24.00
	5610	17.39	16.98	17.54	18.14	23.55	24.00
	5690	17.38	17.31	17.63	18.09	23.63	24.00

 Note: Total power =  $10 * \lg(10^{\text{port 0 / 10}} + 10^{\text{port 1 / 10}} + 10^{\text{port 2 / 10}} + 10^{\text{port 3 / 10}})$ .

## 5 Power spectrum density

Test result: Pass

### 5.1 Test limit

- For an outdoor access point operating in the band 5.15-5.25 GHz, the maximum power spectral density shall not exceed 17 dBm in any 1 megahertz band.
- For an indoor access point operating in the band 5.15-5.25 GHz, the maximum power spectral density shall not exceed 17 dBm in any 1 megahertz band.
- For mobile and portable client devices in the 5.15-5.25 GHz band, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band.
- For the 5.25-5.35 GHz and 5.47-5.725 GHz bands, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band.
- For the band 5.725-5.85 GHz, the maximum power spectral density shall not exceed 30 dBm in any 500 kHz band.

If the transmitting antenna of directional gain greater than 6dBi is used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi. If there have a beam forming type, the limit should be the less of original and original + (6 - antenna gain - beamforming gain).

### 5.2 Test Configuration

### 5.3 Test procedure and test setup

The power spectral density per FCC §15.407(a) was measured from the antenna port of the EUT according to the measurement method refer to KDB 789033D02: section F.

1. Create an average power spectrum for the EUT operating mode being tested by following the instructions in section II.E.2. for measuring maximum conducted output power using a spectrum analyzer or EMI receiver: select the appropriate test method (SA-1, SA-2, SA-3, or alternatives to each) and apply it up to, but not including, the step labeled, “Compute power...”. (This procedure is required even if the maximum conducted output power measurement was performed using a power meter, method PM.)
2. Use the peak search function on the instrument to find the peak of the spectrum and record its value.
3. Make the following adjustments to the peak value of the spectrum, if applicable: a) If Method SA-2 or SA-2 Alternative was used, add  $10 \log(1/x)$ , where x is the duty cycle, to the peak of the spectrum. b) If Method SA-3 Alternative was used and the linear mode was used in step II.E.2.g)(viii), add 1 dB to the final result to compensate for the difference between linear averaging and power averaging.
4. The result is the Maximum PSD over 1 MHz reference bandwidth.
5. For devices operating in the bands 5.15-5.25 GHz, 5.25-5.35 GHz, and 5.47-5.725 GHz, the above procedures make use of 1 MHz RBW to satisfy directly the 1 MHz reference bandwidth specified in § 15.407(a)(5). For devices operating in the band 5.725-5.85 GHz, the rules specify a measurement bandwidth of 500 kHz. Many spectrum analyzers do not have 500 kHz RBW, thus a narrower RBW may need to be used. The rules permit the use of a RBWs less than 1 MHz, or 500 kHz, “provided that the measured power is integrated over the full reference bandwidth” to show the total power over the specified measurement bandwidth (*i.e.*, 1 MHz, or 500 kHz). If measurements are performed using a reduced resolution bandwidth (< 1 MHz, or < 500 kHz) and integrated over 1 MHz, or 500 KHz bandwidth, the following adjustments to the procedures apply:
  - a) Set RBW  $\geq 1/T$ , where T is defined in section II.B.I.a).
  - b) Set VBW  $\geq 3$  RBW.
  - c) If measurement bandwidth of Maximum PSD is specified in 500 kHz, add  $10\log(500\text{kHz}/\text{RBW})$  to the measured result, whereas RBW (< 500 kHz) is the reduced resolution bandwidth of the spectrum analyzer set during measurement.
  - d) If measurement bandwidth of Maximum PSD is specified in 1 MHz, add  $10\log(1\text{MHz}/\text{RBW})$  to the measured result, whereas RBW (< 1 MHz) is the reduced resolution bandwidth of spectrum analyzer set during measurement.
  - e) Care must be taken to ensure that the measurements are performed during a period of continuous transmission or are corrected upward for duty cycle.

Note: As a practical matter, it is recommended to use reduced RBW of 100 kHz for the sections 5.c) and 5.d) above, since RBW=100 kHz is available on nearly all spectrum analyzers.

## 5.4 Test Protocol

Temperature: 25 °C

Relative Humidity: 55 %

### U-NII-2A Band:

## 6 Radiated Emissions

**Test result:** Pass

### 6.1 Test limit

6.1.1 The radiated emissions which are lower than 1GHz or fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) showed as below:

Frequency (MHz)	Field Strength (dBuV/m)	Measurement Distance (m)
30 - 88	40.0	3
88 - 216	43.5	3
216 - 960	46.0	3
Above 960	54.0	3

6.1.2 The emission which is outside the restrict bands, should comply with the EIRP limit as below:

For transmitters operating in the 5.15–5.25 / 5.25 – 5.35 / 5.47 – 5.725 GHz band:

Frequency (MHz)	EIRP Limit (dBm)	Equivalent Field Strength (3m) (dB $\mu$ V/m)
<5150		
>5350		
<5470	-27	68.20
>5725		

For transmitters operating in the 5.15–5.25 / 5.25 – 5.35 / 5.47 – 5.725 GHz band Assessed with 15.209(a):

Frequency (MHz)	Field Strength (dBuV/m)	Measurement Distance (m)
30 - 88	40.0	3
88 - 216	43.5	3
216 - 960	46.0	3
Above 960	54.0	3

For transmitters operating in the 5.725 – 5.85GHz band:

Frequency (MHz)	EIRP Limit (dBm/MHz)	Equivalent Field Strength (3m) (dB $\mu$ V/m)
<5650	-27	68.20
5650 ~ 5700	-27 ~ 10	68.20 ~ 105.20
5700 ~ 5720	10 ~ 15.6	105.20 ~ 110.80
5720 ~ 5725	15.6 ~ 27	110.8 ~ 122.2
5850 ~ 5855	27 ~ 15.6	122.2 ~ 110.8
5855 ~ 5875	15.6 ~ 10	110.8 ~ 105.20
5875 ~ 5925	10 ~ -27	105.20 ~ 68.20
>5925	-27	68.20

6.1.3 As specified in 15.407(b), emissions above 1000 MHz that are outside of the restricted bands are subject to a peak emission limit of -27 dBm/MHz (or -17 dBm/MHz as specified in 15.407(b)(4)). However, an out-of-band emission that complies with both the average and peak limits of 15.209 is not required to satisfy the -27 dBm/MHz or -17 dBm/MHz peak emission limit.

## 6.2 Test Configuration

### 6.3 Test procedure and test setup

The measurement was applied in a semi-anechoic chamber. While testing for spurious emission higher than 1GHz, if applied, the pre-amplifier would be equipped just at the output terminal of the antenna.

Tabletop devices shall be placed on a nonconducting platform with nominal top surface dimensions 1 m by 1.5 m. For emissions testing at or below 1 GHz, the table height shall be 80 cm above the reference ground plane. For emission measurements above 1 GHz, the table height shall be 1.5 m.

The turntable rotated 360 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna which was mounted on an antenna mast. The antenna moved up and down between from 1meter to 4 meters to find out the maximum emission level.

The EUT was tested according to KDB 789033 D02: Section G.

The radiated emission was measured using the Spectrum Analyzer with the resolutions bandwidth set as:

RBW = 300 Hz, VBW = 1 kHz (9 kHz~150 kHz);  
RBW = 10 kHz, VBW = 30 kHz (150 kHz~30MHz);  
RBW = 100 kHz, VBW = 300 kHz (30MHz~1GHz for PK)  
RBW = 1MHz, VBW = 3MHz (>1GHz for PK);

Remark:

1. Factor= Antenna Factor + Cable Loss (-Amplifier, is employed)
2. Measured level= Original Receiver Reading + Factor
3. Margin = Limit – Measured level
4. If the PK measured level is lower than AV limit, the AV test can be elided.

Example:

Assuming Antenna Factor = 30.20dB/m, Cable Loss = 2.00dB,  
Gain of Preamplifier = 32.00dB, Original Receiver Reading = 10dBuV.  
Then Factor =  $30.20 + 2.00 - 32.00 = 0.20\text{dB}/\text{m}$ ;  
Measured level =  $10\text{dBuV} + 0.20\text{dB}/\text{m} = 10.20\text{dBuV}/\text{m}$   
Assuming limit = 54dBuV/m,  
Measured level =  $10.20\text{dBuV}/\text{m}$ , then Margin =  $54 - 10.20 = 43.80\text{dBuV}/\text{m}$ .

## 6.4 Test Protocol

Temperature: 25 °C

Relative Humidity: 55 %

The low frequency, which started from 9 kHz to 30MHz, was pre-scanned and the result which was 20dB lower than the limit line per 15.31(o) was not reported.

The worst waveform from 30MHz to 1000MHz is listed as below:

Horizontal

No	Flag	Mark	Frequency (MHz)	Measure Level (dBuV/m)	Reading Level (dBuV)	Over Limit (dB)	Limit (dBuV/m)	Factor (dB)	Type
1			143.526	27.181	12.450	-16.319	43.500	14.731	QP

## 7 Frequency Stability

Test result: Pass

### 7.1 Limit

Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual.

### 7.2 Block Diagram of Test Setup

### 7.3 Test Procedure and Test Setup

- a) To ensure emission at the band edge is maintained within the authorized band, those values shall be measured by radiation emissions at upper and lower frequency points, and finally compensated by frequency deviation as procedures below.
- b) The EUT was operated at the maximum output power, and connected to the spectrum analyzer, which is set to maximum hold function and peak detector. The peak value of the power envelope was measured and noted. The upper and lower frequency points were respectively measured relatively 10dB lower than the measured peak value.
- c) The frequency deviation was calculated by adding the upper frequency point and the lower frequency point divided by two. Those detailed values of frequency deviation are provided in table below.

## 7.4 Test Protocol

Temperature: 25 °C

Relative Humidity: 55 %

Temperature (°C)	Voltage (V)	Mod.	Freq. (MHz)	Center Frequency (MHz)	Frequency Deviation (MHz)	Frequency Stablility (ppm)
20	90	11a	5320	5319.975	-0.025	-4.70
20	135	11a	5320	5319.975	-0.025	-4.70

50	120	11a	5500	5499.975	-0.025	-4.55

## 7.5 Measurement uncertainty

Measurement uncertainty:  $\pm 0.84 \times 10^{-7}$

## 8 Power line conducted emission

**Test result:** Pass

### 8.1 Limit

Frequency of Emission (MHz)	Conducted Limit (dBuV)	
	QP	AV
0.15-0.5	66 to 56*	56 to 46 *
0.5-5	56	46
5-30	60	50

\* Decreases with the logarithm of the frequency.

### 8.2 Test configuration

For table top equipment, wooden support is 0.8m height table

For floor standing equipment, wooden support is 0.1m height rack.

### 8.3 Test procedure and test set up

Measured levels of ac power-line conducted emission shall be the emission voltages from the voltage probe, where permitted, or across the 50 Ω LISN port (to which the EUT is connected), where permitted, terminated into a 50 Ω measuring instrument. All emission voltage and current measurements shall be made on each current-carrying conductor at the plug end of the EUT power cord by the use of mating plugs and receptacles on the LISN, if used. Equipment shall be tested with power cords that are normally supplied or recommended by the manufacturer and that have electrical and shielding characteristics that are the same as those cords normally supplied or recommended by the manufacturer. For those measurements using a LISN, the 50 Ω measuring port is terminated by a measuring instrument having 50 Ω input impedance. All other ports are terminated in 50 Ω loads.

Tabletop devices shall be placed on a platform of nominal size 1 m by 1.5 m, raised 80 cm above the reference ground plane. The vertical conducting plane or wall of an RF-shielded (screened) room shall be located 40 cm to the rear of the EUT. Floor-standing devices shall be placed either directly on the reference ground-plane or on insulating material as described in ANSI C63.4. All other surfaces of tabletop or floor-standing EUTs shall be at least 80 cm from any other grounded conducting surface, including the case or cases of one or more LISNs.

The bandwidth of the test receiver is set at 9 kHz.
